

Tornadoes have the potential to create significant property damage and business interruption. While there is new technology in forecasting, yielding increased warning times, tornadoes can still strike without much warning, so it is critical to prepare in advance and create plans for mitigating damage. The following are some general suggested tips and actions to consider taking, before, during, and after a tornado strikes.

SOME TIPS AND ACTIONS TO TAKE DURING A TORNADO WARNING

COME TIDE	AND ACTION	C TO TAVE DE	FORF TORNAD	O CEACON
SOME HPS	AND ACTION	S III IAKE KE	FUKE TUKNAN	U SEASUN

	Develop an emergency Response Team as part of the Plant Emergency Organization ✓		Establish emergency communication methods.	
П	Prepare, or locate, and maintain a scaled plan or diagram of the facility which		Watch for tornado danger signs: ✓	
ш	clearly shows the location of all fire protection and other emergency equipment.		+ Dark, often greenish clouds - a phenomenon caused by hail	
П	Pre-qualify and pre-commit as many certified repair and service contractors as		+ Wall cloud - an isolated lowering of the base of a thunderstorm	
_	possible, including both local and nation firms.		+ Cloud of debris	
	Understand your energy needs and make arrangements for backup utilities and fuel sources where possible. Anticipate loss of electrical power and other utilities		+ Large hail	
			+ Funnel cloud - a visible rotating extension of the cloud base	
_	and consider emergency generators, alternative fuels, etc.		+ Roaring noise	
	Review the structural integrity of buildings and structures, including rotted wood, rusted metal, physical damage, loose/missing fasteners, etc. Replace or repair damaged components.		Turn off non-essential lighting, machinery and equipment. Anticipate power outages and surges. $\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \$	
П	Review and evaluate the wind resistance of each structure and implement		Back up important computer data and records.	
	mprovements.		If you do not have a safe room or a tornado shelter, identify the safest area of	
	Inspect roof coverings, perimeter flashings, gutters, drains, ventilators, and other roof-mounted equipment.		your home or business such as a basement or a small interior room without windows. $\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \$	
_	Check for weak door and window latches and hardware. ✓		Do not open windows. This may actually make things worse by giving wind a rain a greater chance of getting inside.	
	Identify and consider removing any large trees which may fall and damage buildings or structures.		Don't try to ride out a tornado in a manufactured home. Even manufactured homes with tie-downs overturn in these storms because they have light frame and offer winds a large surface area to push against. Their exteriors are also vulnerable to high winds and wind-borne debris.	
SOME TIPS AND ACTIONS TO TAKE AFTER A TORNADO			If driving when a tornado is imminent, buckle your seat belt and try to drive to the closest sturdy shelter.	
	Continue listening to local news or NOAA Weather Radio for updated information and further instructions.		If debris starts flying while you are driving, pull over and park. Stay in the ca with the seat belt on. Put your head down below the windows, covering with your hands and a blanket if possible.	
	Damage should be surveyed and, as soon as possible, notification of the fire protection impairments to the local fire department and/or police departments.			
	Report damage to insurance companies as soon as possible.			
	Survey for safety hazards such as downed electrical wires, leaking gas or flammable liquids, damage to underground piping, etc. Notify the appropriate utilities as soon as possible.			
	Take measures to temporarily repair areas in order to prevent further damage.
