

Hurricane season is from June 1 st to November 30th. If you operate near hurricane prone areas, have a plan of what to do before, during and after a hurricane strikes. The following tips and actions may be helpful to consider during a hurricane.

Tips for business

or entry into the property to reduce the likelihood of release if pipes are broken. When equipment or processes must be kept in operation, service to all other are of the plant should be secured using isolation valving. Pipes should be properly supported and protected from wind and debris. Avoid elevators. The plant emergency organization should remain on site, if safe to do so, until the emergency has passed. Patrol the property looking for structural damage, fires, flooding, etc. Consider flooding potentials:	 Designate a member of the Hurricane Emergency Response Team to monitor weather conditions and communicate required actions as regularly as possible.
 Shut off all flammable and combustible liquid piping and gas lines at the source or entry into the property to reduce the likelihood of release if pipes are broken. When equipment or processes must be kept in operation, service to all other are of the plant should be secured using isolation valving. Pipes should be properly supported and protected from wind and debris. Avoid elevators. The plant emergency organization should remain on site, if safe to do so, until the emergency has passed. Patrol the property looking for structural damage, fires, flooding, etc. Consider flooding potentials: 	outages and surges; be prepared to shut down susceptible systems such as
